"SPSS Text" not "Log." Anybody know if this is possible or is SPSS Text only available via pull-down menus?

Thanks

Response from SPSS Tech Support was that currently there is no way to insert SPSS Text object into output via syntax.

If you have SPSS 15 with programmability installed, this can be done pretty easily.

Run the following code (it could be included via an INSERT command)
begin program.

import spss

def printcomment(text):

"Insert text into Viewer as a text block"

spss.StartProcedure("Comment")

spss.TextBlock("Comment", text)

spss.EndProcedure()

end program.

Then whenever you want to insert a comment, do something like this:

begin program.

printcomment("here are some thoughts

about my analysis so far.

It appears that inserting comments works pretty well.")
